

Carbon Neutral Schools

A step towards a greener, more environmentally conscious future!

Welcome to Carbon Neutral School Project!

The Carbon Neutral Schools project is an international Erasmus+ project developed by partners from seven countries: Latvia, Finland, Austria, Italy, Belgium, Croatia and Lithuania, who, through their diverse knowledge and experience, are developing digital and interactive learning solutions to raise awareness of carbon neutrality at school.

Carbon Neutral School's project aims to hasten carbon-neutrality-supporting activities through educational initiatives. Schools will have the chance to teach pupils how to assess various types of evidence and come to their judgments to become conscientious climate-sensitive citizens by teaching carbon neutrality.

Objectives

Low-carbon education

The goal of the project is to allow schools around Europe to begin their low-carbon education programs based on the adopted introduction course.

As a result, all partners' diverse knowledge and experience will be incorporated into a digital and interactive learning solution.

Green Ambassadors

The project will introduce the concept of the Green Ambassadors, who will be the organization's most enthusiastic and qualified members in terms of assisting the organization in achieving its zero-carbon targets.

Needs assessment

Since the core of the E-learning course will be applicable to a variety of educational sectors, even if the specifics might vary, the project will examine the needs of all sectors as well as the needs of different participating countries and regions (e.g., South vs. Nord).

Carbon Neutral Schools

A step towards a greener, more environmentally conscious future!

Results

Until now, we have been working on **Factor Maps** to pinpoint factors that could significantly diminish schools' carbon footprint. The factors that were ranked as priority 1 or 2 by all countries include the need to make students understand the importance of carbon neutrality through education, using renewable energy in schools, and increasing awareness of carbon neutrality for all.

Please read our Report to know more!

We will provide an online interactive **E-learning course** titled "Organization's Low Carbon Expert" available to schools, HEIs, vocational schools, and all other interested educational organizations in Europe.

The course development will be complemented by stakeholder mapping and needs assessment **workshops**.

The project will introduce the **concept of Green Ambassadors** working on encouraging students and administration to change their behaviour towards climate neutrality.
